

More mowing in less time - with the new Egholm rotary/mulch mower 1500

The rotary/mulch mower 1500 is the latest addition to a wide selection of Park Ranger 2150 attachments - an innovative solution with its unique hydraulic features and newly developed blades.

Well-groomed grass areas look good and are an attractive asset for visitors and residents. But time and efficiency are of the essence for the municipality, contractor, or park owner responsible for maintaining these green areas. With a cutting width of 1500 mm and a working speed of up to 10 km/h, the new rotary/mulch mower 1500 helps you cut grass in record time. That goes for even the highest, roughest - and also wet - patches of grass. In addition, the Park Ranger 2150 attachment is made from high-end materials making it a robust solution built to last.

Mulch mower delivers natural fertilization

You can opt to transform the rotary mower into a mulch mower (optional) with a new set of blades and by inserting a screen on the inside of the mower. This enables the attachment to fine-chop and spread the grass by blowing it onto the bottom of the lawn thus fertilizing the soil with natural nutrients. Using the mulch mower, you also avoid the hassle of removing the grass clippings when the work is done.

Hydraulic tipping system for easy cleaning

Employing the Park Ranger 2150's hydraulic system, the rotary/mulch mower can be placed in a vertical position to provide easy access for cleaning and maintenance - the first attachment in its class offering this unique feature without the use of tools. Finally, when you wish to detach the mower from the machine, two supporting wheels deliver great stability and mobility during the process. And changing the rotary/mulch mower only takes a few minutes.

Practicality in its purest form

Cutting height can also be adjusted through the machine's hydraulic system. The rotary/mulch mower 1500 is equipped with newly developed blades designed to guarantee a great finish and reduce both time and energy consumption. The robustness of the mower is emphasized through its sturdy rock shield with reinforced edges.

The Park Ranger 2150 is built to reach the narrowest of spots and drive close to obstacles due to its articulated steering making it highly manoeuvrable. Also, the driver has an open view of the mower when working on the lawn.
