Egholm launches the new Park Ranger 2155

Egholm proudly presents the new Park Ranger 2155 utility machine - an upgraded version of the well-known Park Ranger 2150, now offering even more comfort, efficiency, and environmentally friendly operation. The Park Ranger 2155 is not just a utility machine - it's a future-proof machine that delivers exceptional performance while being mindful of the environment.

Drive with a clear conscience. Drive in comfort

The new Park Ranger 2155 is equipped with a reliable Stage V diesel engine, which not only meets the strictest European emission standards but can also run on HVO100 biodiesel, an eco-friendly CO₂-reduced fuel solution.

With lower particle emissions, reduced noise levels, and improved fuel economy, the Park Ranger 2155 enables maintenance work to be carried out with environmental consideration – without compromising performance.

Enhanced comfort and functionality

The Park Ranger 2155 sets new standards for user-friendliness and comfort. Its articulated design ensures outstanding maneuverability, even in tight spaces.

Its compact size makes it ideal for use on lawns, where the lightweight construction minimizes surface impact.

Operator comfort is prioritized with features like reduced vibrations, easy access to the driver's seat, and intuitive control of the machine's functions.

Change attachments in under four minutes

The Park Ranger 2155 is designed for versatility. With a wide range of tailor-made attachments - from suction sweeper units and mowers to snow ploughs and salt and sand spreaders - it can handle a variety of outdoor maintenance tasks all year round.

Attachment changes take under four minutes and require no tools or heavy lifting, allowing operators to switch between tasks without wasting time.

New options

The new Park Ranger 2155 comes with a range of new options that make work both more efficient and comfortable: A rear-view camera with a colour screen, heated side mirrors, front LED working lights, a mechanical seat with armrests, flash light, and a cup holder.

Danish design with a focus on quality

Egholm is known for delivering top-quality utility machines, and the Park Ranger 2155 is no exception.

Manufactured in Denmark by skilled technicians, this machine is the result of innovative design and meticulous production.

All attachments are specially designed to ensure optimal balance and performance, allowing operators to deliver first-class results every day.
